

VIRTUAL ESTIMATING

VIRTUAL ESTIMATING

A Customer-Driven Approach To The Claims Industry

With virtual estimating technology, claimants are able to use their smart device as an estimating tool by taking and submitting photos of their vehicle or property damage at their convenience.

VIRTUAL ESTIMATING

Turn your smart device into an estimating tool.

Increased Efficiency & Claimant Satisfaction

Photo-based estimating is a popular, efficient method of inspection for both claimants and insurance companies. By eliminating travel and tasks like appointment setting, our appraisers can focus their efforts on the actual appraisal. Claimants, on the other hand, benefit from the speed, ease and convenience that comes from a digital self-service solution.

DECREASED CYCLE TIME

Virtual estimating is a cost-effective method of inspection for both claimants and insurance companies. The amount of time required for virtual estimates is far less than that of in-person estimates.

EASE & CONVENIENCE

Virtual estimating technology gives claimants the ability to submit vehicle and property damage photos at their convenience and receive accurate appraisals with little effort on their part.
